

# Mind Maps

## What is a Mind Map and how can it help our pupils?

A Mind Map is a visual way for pupils to sort and record the information they are learning to make it easier to remember. Mind Maps help with pupils retention by using colour and pictures to help with their retrieval of information or ideas learnt.

Mind Maps also specifically help the child with ASC because visual connections are clear, so helping the child see how the ideas fit together.

## Aim of the Mind Map

- To strengthen the meaning links between words
- To improve classification and organisation of material
- To develop memory strategies
- To facilitate retrieval of information
- To build the child's self-esteem
